

EMS Quality Management

The following articles were selected from a literature search performed on the National Library of Medicine's PubMed database in September 2003 by *EMSMJ* staff. The results of the search were manually edited to only include those citations which were deemed pertinent to the general topic of EMS quality management and related issues in evaluation, outcome, assessment, data collection and any applicable tools or techniques used in quality management. The editing process was made by review of the title and journal in the citation - the actual source documents were not reviewed in this process.

Citations appear in approximate reverse chronological order with the most recent citations at the start of the list. The PubMed database only goes back to 1966, so citations pre-dating 1966 will not appear in this listing. To retrieve any of these citation via PubMed, go to www.pubmed.gov and type the PMID number into the search box.
